## Summary

I am a Junior Developer with a passion for understanding how things work and improving them. With several years of programming experience, I specialize in developing efficient, well-organized and maintainable code. I am an advocate for keyboard-centric workflows and strive for continuous learning in programming and technology.

Through the years I have used various frameworks and programming languages for different projects. I have also been working on a linux system for a couple of years now. Because of this I now have broad knowledge on subjects related to programming.

## Experience as Junior Developer

*Netinium B.V.*

**06-02-2023 - 07-07-2023**

- Fixing sonar code smell, bad code issues.
- Using ArchTest to test the JAVA architecture on design rules.
